PROFESSIONAL SUMMARY

A proactive Informatics Engineering graduate specializing in Full-Stack Web Development (ASP.NET Core, Laravel) and Data Engineering (Python, SQL). Proven track record of accelerating operational workflows by digitizing complex systems and optimizing >20,000-row enterprise datasets across top-tier institutions like Bank Indonesia and PT Kilang Pertamina Internasional. Combines strong technical execution with executive organizational leadership to deliver scalable software and actionable data solutions.

EDUCATION

State Islamic University Sultan Syarif Kasim Riau

Bachelor of Informatics Engineering | GPA : 3.66/4.00

- Awardee: KIP-Kuliah (Kartu Indonesia Pintar) Merit & Need-Based Scholarship Program.

EXPERIENCE

Bank Indonesia

Economic & Financial Statistics Data Intern

April — May 2026, Pekanbaru, Riau

- Data Processing for Inflation Analysis: Extracted, filtered, and structured over 20,000+ rows of aggregated historical PIHPS data (basic commodities) utilizing advanced Microsoft Excel, significantly accelerating the regional inflation analysis process.
- Daily Digital Data Auditing: Conducted daily digital auditing of economic reporting to ensure high data integrity, accuracy, and compliance for regional metrics.
- Digital Archiving Optimization: Executed the digitization of operational documents and compiled comprehensive data analysis documentation, optimizing cross-functional information retrieval.

Kemendikdasmen (Balai Bahasa Provinsi Riau)

IT - Web Developer Intern

February — March 2026, Pekanbaru, Riau

- Data Pipeline Automation: Engineered end-to-end data workflows using Python scripts for data collection, cleaning, and transformation, transitioning manual datasets into a structured digital archive system.
- Digital Platform Engineering: Developed "SEMBARI", a flagship digital literacy platform hosting 60 interactive e-books that successfully reached over 1,442 active readers.
- Full-Stack Web Development: Designed and launched the official institutional web portal (Laravel) to centralize public services, achieving a peak traffic of 2,142 unique visitors in April 2026.
- IT Infrastructure & Technical Support: Provided hands-on technical support for daily IT operations, including diagnosing server network connectivity issues and maintaining local area network (LAN) cabling infrastructure to ensure seamless institutional activities.

PT. Kilang Pertamina Internasional Refinery Unit II Dumai

Software Engineer Intern

February — March 2025, Dumai, Riau

- Enterprise Application Development: Designed and engineered SIMIT (Internship Information System) from scratch leveraging C# and the ASP.NET Core framework, implementing Clean Architecture and MVC patterns.
- System Troubleshooting & UI/UX: Diagnosed and resolved critical frontend bugs within the company's internal IT Helpdesk & Ticketing system, improving interface responsiveness and user experience.
- End-to-End SDLC Management: Managed the full Software Development Life Cycle within a strict industrial environment, ensuring secure data handling and seamless frontend-backend integration.

Organization

Himpunan Mahasiswa Teknik Informatika (HIMATIF) UIN Sultan Syarif Kasim Riau

Vice Chairman

December 2024 — December 2025, Pekanbaru, Riau

- Strategic Program Management: Orchestrated the successful execution of 10+ large-scale organizational programs encompassing academic development, non-academic events, and community empowerment initiatives.
- Team Leadership & Coordination: Directed, mentored, and supervised cross-functional event committees across 8 internal divisions, ensuring effective resource allocation and successful project delivery.
- Stakeholder Engagement: Served as the primary strategic liaison bridging over 700+ active students, executive board members, and academic faculty to align institutional policies with student development needs.

- End-to-End Event Management: Directed and orchestrated the department's largest flagship event, successfully uniting hundreds of students, academic faculty, and alumni networks to foster institutional collaboration.
- Program & Tech-Competition Execution: Spearheaded the planning and execution of core event agendas, notably managing a large-scale UI/UX design competition that successfully drove high participant engagement and showcased digital innovation.
- Team Leadership & Stakeholder Engagement: Led a cross-functional event committee, facilitating effective coordination with academic boards and external corporate sponsors to ensure seamless event delivery and resource optimization.

Design Lead

December 2023 — December 2024, Pekanbaru, Riau

- Creative Direction & Event Branding: Led the creative direction and visual identity development for major organizational events, successfully designing digital publication materials that attracted over 2,000+ digital participants.
- Digital Content & Engagement Strategy: Directed the visual production of organizational communication assets and managed the content pipeline, significantly increasing Instagram engagement rates and audience growth by 25% through modern, consistent branding.
- Quality Control & Cross-Functional Collaboration: Collaborated closely with cross-functional departments to conduct strict quality control on social media publications, ensuring the timely distribution of academic information with a 0% design error rate.

Riau DevOps Community

Event and Program Coordinator

May 2024 — December 2024, Pekanbaru, Riau

- Tech-Community Initiatives: Managed and orchestrated educational and community-driven initiatives focused on software system development, cloud infrastructure, and operational excellence.
- Engagement & Knowledge Sharing: Fostered a collaborative tech-learning ecosystem, successfully driving community member engagement through structured technical workshops and networking events.
- Stakeholder & Speaker Coordination: Facilitated technical discussions and bridged the gap between IT students and industry practitioners, ensuring the smooth execution of community programs.

PROJECT

StrokePredict AI – End-to-End ML Healthcare System | *React, FastAPI, XGBoost, Docker*

- Engineered a full-stack web application for stroke risk prediction, integrating a React (Vite) frontend with an asynchronous FastAPI backend.
- Developed machine learning pipelines utilizing XGBoost (Classifier) and K-Means (Clustering) for patient segmentation based on overall risk profiles.
- Implemented Explainable AI (XAI) using SHAP TreeExplainer to generate interactive visualizations, demonstrating a production-ready, transparent AI architecture.
- Containerized the entire system architecture using Docker Compose to ensure seamless deployment and environment consistency.

AfterSunset.idn – Digital Cashier & Financial Management System | *Laravel, PHP, SQL*

- Developed a comprehensive Point of Sales (POS) and financial tracking web application tailored specifically for MSME (UMKM) operational workflows.
- Optimized daily transaction recording, inventory tracking, and revenue reporting, significantly improving the business's financial visibility and operational efficiency.

SKILLS

- Programming & Frameworks: C#, PHP, Python, JavaScript, ASP.NET Core, Laravel, React (Vite), FastAPI.
- Data & AI Ecosystem: SQL (Advanced), MySQL, Data Pipeline Automation, XGBoost, K-Means Clustering, SHAP (Explainable AI), Pandas.
- Infrastructure & Tools: Git, GitHub, Docker Compose, RESTful APIs, Postman.
- Data Visualization & Design: Power BI, Looker Studio, Microsoft Excel (Advanced Pivot/Formulas), Figma, UI/UX
- Design.Core Competencies: Full-Stack Web Development, System Architecture, Agile Project Management, Strategic Tech Leadership.
- Languages : Indonesian (Native), English (Advanced), Arabic (Basic)
